

# TAKE YOUR PLACE IN SPACE!

The U.S. space industry is expanding, enabling potential careers in space to expand as:

NASA's Kennedy Space Center and Wallops Flight Facility launch rockets for both NASA and commercial space companies;

Aerospace companies build a powerful exploration rocket and crew vehicle ... the Space Launch System and the Orion crew vehicle ... to take astronauts beyond low-Earth orbit to asteroids and Mars in the next two decades.

Commercial space companies transport cargo, will become certified to transport astronauts to the International Space Station, and are planning to open low-Earth orbit to space tourism.

INVENT YOUR FUTURE IN SPACE
